# Paste Players from any Source

Players can be copied from a file or the internet and pasted into the app. First, select a delimiter to separate each field (name, number, position, etc). The app assumes each player is separated by a "New Line" character. If a team for these players does not yet exist, it can be added from this screen. The app attempts to remove headers and extraneous information like "Jr." or "Sr."

## Paste the Team Roster
